

RACE COASTAL ENGINEERING: YACHT CLUB AND MARINA SERVICES

Yacht clubs and marinas have unique needs when it comes to maintaining resiliency in their waterfront assets, such as structural repairs and replacement, shoreline stabilization, dredging, and long-term planning. These challenges are further complicated by storm preparations and damage response.

Race Coastal Engineering provides an unparalleled combination of coastal, structural, geotechnical, and dredging expertise that is specific to the coastal environment. Through our singular focus on waterfront projects, RACE is committed to delivering successful, innovative and resilient engineering solutions with our full-range of professional services.

Our Yacht Clubs and Marinas services:

- Facility/site Assessments:
 - Seawall
 - Pier
 - Docks and Pilings
 - Dockhouse Foundation
- Hydrographic Surveying
- Dredge Planning
- Federal, State and Local Permitting
- Marina Planning and Design
- Breakwaters and Wave Protection Structures
- FEMA Compliance/ Flood Studies
- Environmental Permitting
- Beach Nourishment & Dune Restoration
- Flood & Erosion Control Structures
- Coastal Modeling

We value what our clients have to say about us and about our work and we always strive to do each job the best we can. It's nice to hear from them when they think we did a great job too:

"Our relationship with RACE has spanned the past 20 years and included projects of critical importance to our members. These have included dredging of marina and fairways, replacement of our iconic and historic pier, monitoring and management of site storm water issues, FEMA compliance and flood insurance related issues, hydrographic surveying and monitoring of navigation depths, and overall facility planning incorporating our marine and waterfront. RACE has proven to provide valuable expertise and responsiveness for our marine projects and is a true partner with RYC in the management of our waterfront."

Gary B. Ashley, General Manager,
Riverside Yacht Club

ABOUT US

RACE Coastal Engineering was founded in 1999 with the single purpose of providing specialty coastal engineering consultation and design to clients throughout the Northeast. These services have included more than 1,500 waterfront projects including 50+ dredging projects over the past 20 years. RACE brings a holistic approach to projects using our in-house coastal, geotechnical and structural expertise along with our extensive regulatory and construction phase experience to effectively address every facet of a project.

THE RACE DIFFERENCE

- Sole Focus on Waterfront Projects
- Specialized Coastal Engineering Experience
- Recognized Experts by CTDEEP and USACE
- Local and Responsive
